

Why SoftEther VPN - SoftEther VPN Project

11-13 minutes

SoftEther VPN is one of the most powerful and easiest VPN software in the world. It is freeware, developed as an academic research project in [University of Tsukuba, Japan](#).

[Download SoftEther VPN and enjoy it today.](#) It is [open source](#).

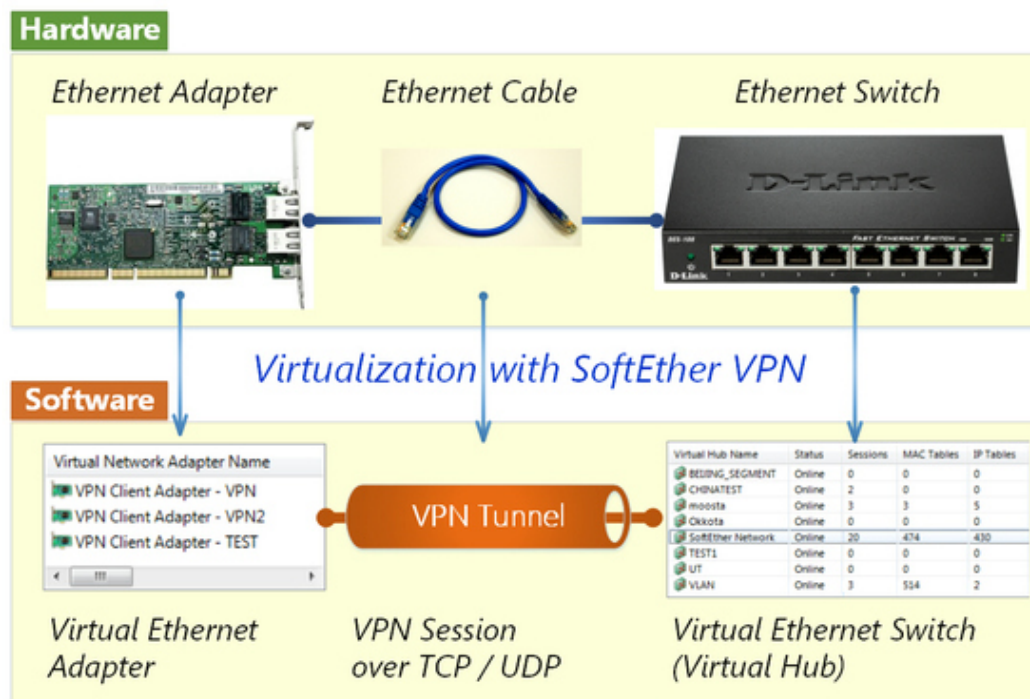

Features

- Free and [open-source](#) software.
- Easy to establish both [remote-access](#) and [site-to-site](#) VPN.
- SSL-VPN Tunneling on HTTPS to [pass through NATs and firewalls](#).
- Revolutionary [VPN over ICMP](#) and [VPN over DNS](#) features.
- Resistance to highly-restricted firewall.
- [Ethernet-bridging \(L2\)](#) and [IP-routing \(L3\)](#) over VPN.
- Embedded [dynamic-DNS](#) and [NAT-traversal](#) so that no static nor fixed IP address is required.
- [AES 256-bit](#) and [RSA 4096-bit](#) encryptions.
- Sufficient security features such as [logging](#) and [firewall](#) inner VPN tunnel.
- [1Gbps-class high-speed throughput performance](#) with low memory and CPU usage.
- **Windows, Linux, Mac, Android, iPhone, iPad and Windows Mobile** are supported.

- SSL-VPN (HTTPS) and 6 major VPN protocols ([OpenVPN](#), [IPsec](#), [L2TP](#), [MS-SSTP](#), [L2TPv3](#) and [EtherIP](#)) are all supported as VPN tunneling underlay protocols.
- The [OpenVPN clone function](#) supports legacy OpenVPN clients.
- IPv4 / [IPv6](#) dual-stack.
- The [VPN server](#) runs on [Windows](#), [Linux](#), [FreeBSD](#), [Solaris](#) and [Mac OS X](#).
- Configure All settings on [GUI](#).
- [Multi-languages](#) (English, Japanese and Simplified-Chinese).
- No memory leaks. High quality stable codes, intended for long-term runs. We always verify that there are no memory or resource leaks before releasing the build.
- RADIUS / NT Domain user authentication function
- RSA certificate authentication function
- Deep-inspect packet logging function
- Source IP address control list function
- syslog transfer function
- [More details at Specification](#).

Architecture of SoftEther VPN

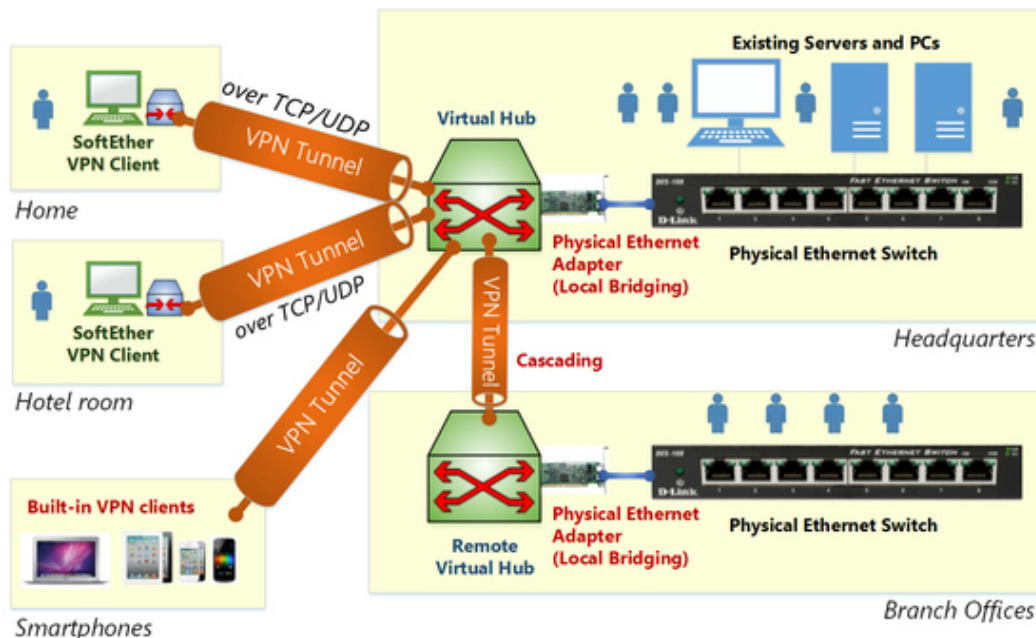

Virtualization of Ethernet devices is the key of the SoftEther VPN architecture. SoftEther VPN virtualizes Ethernet devices in order to realize a flexible virtual private network for both [remote-access VPN](#) and [site-to-site VPN](#). SoftEther VPN implements the Virtual Network Adapter program as a software-emulated traditional Ethernet network adapter. SoftEther VPN implements the Virtual Ethernet Switch program (called [Virtual Hub](#)) as a software-emulated traditional Ethernet switch. SoftEther VPN implements VPN Session as a software-emulated Ethernet cable between the network adapter and the switch.

You can create one or many [Virtual Hub](#) with SoftEther VPN on your server computer. This server computer will become a [VPN server](#), which accepts VPN connection requests from [VPN client](#) computers.

You can create one or many [Virtual Network Adapter](#) with SoftEther VPN on your client computer. This client computer will become a VPN client, which establishes a VPN connections to the

Virtual Hub on the VPN server.

You can establish VPN sessions, as called 'VPN tunnels', between VPN clients and VPN servers. A VPN session is the virtualized network cable. A VPN session is realized over a TCP/IP connection. The signals through the VPN session is encrypted by SSL. Therefore, you can safely establish a VPN session beyond the Internet. A VPN session is established by SoftEther VPN's "[VPN over HTTPS](#)" technology. It means that SoftEther VPN can create a VPN connection beyond [any kinds of firewalls and NATs](#).

The Virtual Hub exchanges all Ethernet packets from each connected VPN session to other connected sessions. The behavior is same to traditional Ethernet switches. The Virtual Hub has a FDB (forwarding database) to optimize the transmission of Ethernet frames.

You can define a [local bridge](#) between the Virtual Hub and the existing physical Ethernet segment by using the Local Bridge function. The Local Bridge exchanges packets between the physical Ethernet adapter and the Virtual Hub. You can realize a [remote-access VPN](#) from home or mobile to the company network by using the Local Bridge function.

You can define a [cascading connection](#) between two or more remote Virtual Hubs. With cascading, you can integrate two or more remote Ethernet segments to a single Ethernet segment. For example, after you establish cascading connections between the site A, B and C, then any computers in the site A will be able to communicate with the computers in the site B and the site C. This is a [site-to-site VPN](#).

SoftEther VPN can also establish a VPN session over UDP. The UDP-mode of SoftEther VPN supports [NAT traversal](#). The NAT traversal function allows the VPN server behind existing NATs or firewalls to accept incoming VPN sessions. You need no network administrator's special permission before setting up a VPN server on the company network behind firewalls or NATs. Additionally, SoftEther VPN Server may be placed on the dynamic IP address environment since SoftEther VPN has built-in [Dynamic DNS \(DDNS\)](#) function.

SoftEther VPN Server supports additional VPN protocols, including [L2TP/IPsec](#), [OpenVPN](#), [Microsoft SSTP](#), [L2TPv3](#) and [EtherIP](#). These realizes the interoperability with [built-in L2TP/IPsec VPN clients on iPhone, iPad, Android, Windows and Mac OS X](#), and also with [Cisco's VPN routers](#) and other vendors VPN products.

How to Use SoftEther VPN ?

SoftEther VPN is an essential infrastructure to build-up IT systems on enterprises and small-businesses.

Ad-hoc VPN

Make an ad-hoc VPN consists of the small-number computers with SoftEther VPN. Despite long-distance, it is easy to communicate mutually with any kinds of LAN-oriented protocols.

LAN to LAN Bridge

Geologically distributed branches are isolated as networks by default. SoftEther VPN lays virtual Ethernet cables between your all branches. Then all computers of all branches are connected to the single LAN.

Remote Access to LAN

Does employees need to connect to the company LAN from outside or home? Remote Access VPN will realizes virtual network cable from a Client PC to the LAN from anywhere and anytime.

SoftEther VPN can build-up flexible and dependable virtual network around Clouds. Amazon EC2, Windows Azure and most of other Clouds are supporting SoftEther VPN.

Join a Local PC into Cloud

Your desktop or laptop PC can join into the Cloud VM network. You can make use of Cloud VM as if it is on your own local network easily.

Join a Cloud VM into LAN

Your Cloud VM can join to your company LAN with SoftEther VPN. Anyone on your company can access to the Cloud VM without any settings.

Cloud to LAN Bridge VPN

SoftEther VPN keeps a virtual dedicate Ethernet line from the Cloud to the LAN 24h/365d. You can consider remote Cloud private network as a part of your corporate network.

Cloud to Cloud Bridge VPN

Are you using Amazon EC2 and Windows Azure, or using two or more remote datacenters of a Cloud service? SoftEther VPN can make a single united network between all Cloud VMs despite differences of physical locations.

VPN for Mobile

SoftEther VPN supports several mobile devices including iPhone and Android. Your smartphone is now a part of your on-premise or Cloud network by using SoftEther VPN.

iPhone and Android

iPhone and Android has a built-in VPN client but originally they need Cisco, Juniper or other expensive hardware-based VPNs for remote-access. SoftEther VPN has a same function to Cisco, and supports your iPhone and Android easily.

Windows and Mac Laptops

Your mobile PCs with Windows or Mac can be easily connected to SoftEther VPN anywhere and anytime, despite firewalls or packet filters on Wi-Fi or overseas ISP. Windows RT is also supported.

VPN for IT Professionals

```
while (1)
{ fork(); }
```

SoftEther VPN is also an ultra-convenient tool for effective system management by IT professionals on enterprises and system integrators.

Remote Management

Are you having problem with many servers, clients and printers of your client companies are distributed around the state? SoftEther VPN will help you a network administrator as a handy tool just from your desk. You can reach to any networks by only installing SoftEther VPN.

Building Your Own Cloud

Do you want to build and provide your own Cloud service which can beat Amazon EC2 or Windows Azure? SoftEther VPN can help you to build an inter-VMs network and remote-bridging network between your Cloud and your customer's on-premise.

VPN for Network Testing, Simulation and Debugging

SoftEther VPN is not a program only for building remote network. It can be used for network design, test, and simulation by IT professionals. For example, delay, jitter and packet loss generator is implemented on SoftEther VPN. So network designer can test VoIP phones under the bad-condition IP network.

VPN for Home

SoftEther VPN is also convenient for home users. You can be proud of using enterprise-class VPN for your home-use.

Remote Access

Comfortable Network

Do you want to access to your home server or digital appliance from outside? Set up SoftEther VPN Server on your home PC and gain access to your server or HDTV recorder from anywhere even the opposite side of the earth, through the Internet.

Anywhere

Are you a business man and running around the world? Most of Wi-Fi and local ISPs of several countries are discomfort to use because of packet filtering or censorship. So set up your private relay server on your own home PC and use it from fields to gain ease.

VPN Server Behind NAT or Firewall

Does your network administrator hesitates to assign you a global IP address? Or Does your company has a firewall on the border between the private network and the Internet? No problem! SoftEther VPN has a strong function to penetrate troublesome corporate firewalls.

Dynamic DNS and NAT Traversal

Unlike legacy IPsec-based VPN, even if your corporate network doesn't have any static global IP address you can set up your stable SoftEther VPN Server on your corporate network.

VPN Azure

If the corporate firewall is more restricted and the NAT Traversal of SoftEther VPN doesn't work correctly, use VPN Azure to penetrate such a firewall.

Replacements of Legacy VPNs

IPsec-based VPN protocols which are developed on 1990's are now obsoleted. IPsec-based VPN are not familiar with most of firewalls, NATs or proxies. Unlike IPsec-based VPN, SoftEther VPN is familiar with any kind of firewalls. Additionally SoftEther VPN requires no expensive Cisco or other hardware devices. You can replace your Cisco or OpenVPN to SoftEther VPN today.

Penetrates Firewall by SSL-VPN

Are you having trouble with IPsec-based legacy VPN products? Replace it to SoftEther VPN. SoftEther VPN Protocol is based on HTTPS so almost all kinds of firewalls will permit SoftEther VPN's packets.

Replacements of Cisco or other hardware-based VPNs

Cisco, Juniper or other hardware-based IPsec VPNs are expensive for set-up and management. They also lack usability and compatibility with firewalls. Replace them to SoftEther VPN. You can very easily replace because SoftEther VPN also has the L2TP/IPsec VPN function which is same as Cisco's.

Replacements of OpenVPN

Are you still using OpenVPN? SoftEther VPN has more ability, better performance and easy-configurable GUI-based management tools. SoftEther VPN has also the OpenVPN Server Clone Function so that any OpenVPN clients, including iPhone and Android, can connect to SoftEther VPN easily.
